T1 circular permutations
k-mer offset test, protein20 k = 5, n_block = 5, call in the right place (false calls on N1 0.4%)
k-mer offset test, any call (inside the region or not)
C2, MMseqs2 two alignments, call in the right place (false calls on N1 0.0%)
C1, MMseqs2 one alignment: never flags a pair
call rate on shuffled copies, best k-mer setting (0.0%)
sensitivity (%), with 95% interval
