same measured target or activity
same measured disulfide connectivity
both called knottin by UniProt
panel b, open: recall over the true positives it could compare; filled: over every true positive
a
b
cysteine framework and loops only
framework, as a label
loop lengths
loop composition, order dropped
loops aligned, loop to loop
whole peptide
Smith-Waterman, BLOSUM62
framework-guided, then reranked by Smith-Waterman
same cysteine count
same count, loops within 2 aa
reduced-alphabet k-mers, every k-mer kept
cys2 (C vs other), k=12
cys_hp3 (C, h, p), k=9
