whole-protein index: old script, measured peak (full run)
whole-protein index: old script, killed at 24 GB (needs more)
whole-protein index: old script, fitted peak
whole-protein index: new script, measured peak
whole-protein index: new script, first ask
regions, shared-fit and Pfam indexes: old script, measured peak (full run)
regions, shared-fit and Pfam indexes: old script, killed at 24 GB (needs more)
regions, shared-fit and Pfam indexes: old script, fitted peak
regions, shared-fit and Pfam indexes: new script, measured peak
regions, shared-fit and Pfam indexes: new script, first ask
largest ask (950 GB, 1 TB nodes)
label still to score, at its call-file size
Reading the call files in pieces: about 1.5 GB of memory per GB of calls, down from 18-32 GB; the largest label (27 GB of calls) peaks at 40 GB
