Step 1, from notebook 241. kmerseek 0.4.0 (982a055), notebook 241's 152 settings; query Ced9 or P66; target database 19_732 GENCODE v49 canonical human proteins
every human protein, by its best E-value
E = 100: below it, an intermediate
BCL-2 family member (all in the table above)
the protein to reach (BCL2 from Ced9, CD47 from P66)
a
query Ced9
b
query P66
Best E-value over the 152 settings
