QfO midi-plus: 998 human query proteins searched against 9 QfO proteomes. One point per target proteome, raw calls. Higher is better.
before: all 44,315 regions on 18,724 proteins
after: 2,218 regions on the 966 searched proteins that have Pfam-N
after, Fmax at the old best cut-off (true Fmax is at least this)
a
Pfam-N recall (regions found / regions)
