Every marine eDNA study found leaves more than 10% unnamed at genus; the largest gaps are in COI, the one marker that codes a protein
Rule: below 10% in every study means No
Share reported at genus
Share unnamed at a higher rank (genus share is at least this)
COI: protein-coding gene
rRNA gene (12S, 16S, 18S): codes no protein
below 10%: gap too small, answer No
Teixeira et al., Ecol Evol 2025
COI (Leray 313 bp); ASVs, n = 5375
87%
Jeunen et al., Environmental DNA 2023
COI (Leray 313 bp); OTUs, n = 1450
39.6% (at least)
Cerrillo-Espinosa et al., PeerJ 2025
COI (mlCOIintF-XT / dgHCO2198, 313 bp); OTUs, n = 5495
30.8% (at least)
Saenz-Agudelo et al., Ecol Evol 2024
COI; ASVs, n = 4338
74.4%
Saenz-Agudelo et al., Ecol Evol 2024
18S rRNA; ASVs, n = 1859
53.6%
Saenz-Agudelo et al., Ecol Evol 2024
16S rRNA; ASVs, n = 459
14.8%
Jaquier et al., Ecol Evol 2024
12S rRNA (teleo); fish taxa, n = 264
