kmerseek: set A exon queries (exon plus 20 residues each side) against the regions index (Swiss-Prot 2026_03 annotated regions, no mammals; PR 114). protein20 k = 5 left out: no E-values in this kmerseek build.
model 3: kinds 1 to 3
model 4: kinds 1 to 4
0.5: no better than chance
0.02: rule 4's threshold
0: no gain
a
included more in neurons vs unchanged
skipped more in neurons vs unchanged
