ceiling: at least 11 strings with these k-mer counts exist
block shuffle (blocks of k residues)
de Bruijn walk (same k-mer counts), 95% interval
30% of positions changed (the rule)
a
hp_pbotc_1st_ed2: hydrophobic ACFILMPVWY, polar DEGHKNQRST
dayhoff6: C | AGPST | DENQ | HKR | ILMV | FWY
Fraction of proteins passing (n = 1,000)
b
Reduced positions changed (per-protein median over draws)
c
Original k-mer occurrences lost (per-protein median)
k (residues per word)
