
kmerseek hp_lehninger2, scaled 1, extended at C = 1.51. Query: BHF and 100 dipeptide-shuffled copies; target: Swiss-Prot minus Ascidiacea.
Numbers above each k: copies with a region E < 10. BHF below most grey points = more than chance
shuffled copy of BHF: best region
BHF: best region
a
all regions
b
regions under half low complexity
c
shared k-mers: under half low complexity on BHF
d
shared k-mers: under half low complexity on both proteins
Best region E-value (lower is better)
