BHF against its seven phmmer hits in Swiss-Prot minus Ascidiacea; H/P = hp_lehninger2. A run left of the red line is expected by chance
identical residue
same H/P class, different residue
different H/P class
phmmer alignment: longest same-H/P run
k = 17: one shared k-mer needs a run this long
run needed before chance stops explaining it (36, at k17)
a
phmmer's best alignment (E = 0.16): the longest unbroken run of same-H/P columns is 26
