TOOLS: no kmerseek; Pfam-A 38.2 seed pairs from notebook 230 at 30% identity or less, 20 or more aligned positions; BLOSUM62 (Biopython)
On its own diagonal, nine in ten Pfam seed pairs that an exact run certifies are certified by BLOSUM62 too

Hypothesis: If exact runs see pairs BLOSUM62 misses, the upper-left quadrant holds many pairs, and many of them through H/P runs.
Conclusion: 56,033 pairs at 30% identity or less. Exact run only: 282 pairs (254 through a short identical-residue run, 28 through an H/P run). BLOSUM62 segment only: 26,664. Both: 3,336. Shuffled targets, three seeds: 1, 0, 0 run hits and 2, 1, 2 segment hits at 24 bits.
