exon events passing every filter down to this row
changing exons included more in neurons
changing exons included less in neurons
one-exon events (exon with its two neighbours)
exon lies inside the including isoform's ORF
exon length a multiple of 3 (keeps the frame)
proteins differ only by the exon's residues
at least 10 reads in each donor and region
all three donors change in the same direction
mean change in Ψ at least 0.1
